## DETAILED ACTION

### Status

Claims 32-36,38 and 40 are pending

### *Response to Arguments*

The Applicants arguments filed on February 26, 2006 have been fully considered.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 38 is rejected under 35 U.S.C. 103(a) as being unpatentable over Padgett et al (US Patent 6,167,518) in view of Ross (US Patent 6,195,447)

As per claim 38,

Padgett et al ('518) discloses a vendor computer comprising:  
a first input unit to communicate with a first server and to receive a first server message containing information indicating if a user computer was verified:(Figure 1)

Padgett et al ('518) does not explicitly disclose the features of a second input unit to communicate with a second server to receive a second server message containing information indicating if a user was verified: a processor to receive the first server message from the first output and the second server message from the second output and to authorize an action only if both the first server message, contains information indicating the user computer was verified and the second server message, contains information indicating the user was verified wherein the first input unit and the second input unit are the same. Ross ('447) discloses a second input unit to communicate with a second server to receive a second server message containing information indicating if a user was verified: a processor to receive the first server message from the first output and the second server message from the second output and to authorize an action only if both the first server message contains information indicating the user computer was verified and the second server message contains information indicating the user was verified wherein the first input unit and the second input unit are the same(Column 4, lines 1-7), (Column 4, lines 25-27) It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the Padgett et al ('518) method with the Ross ('447) method in order to

increase security in systems that utilize fingerprint comparisons without requiring additional hardware costs.

Claims 32-36, 40 are allowable over the prior art record.

### ***Conclusion***

Examiners note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Any inquiry of a general nature or relating to the status of this application or concerning this communication or earlier communications from the examiner should be directed to John Winter whose telephone number is (571) 272-6713. The Examiner can normally be reached on Monday-Friday, 9:30am-5:00pm. If attempts to reach the examiner by telephone are unsuccessful, the Examiner's supervisor, James Trammell can be reached at (571) 272-6712.
